Imagine a **dragonfly** with wings more than 60 centimetres across!

300 million years ago
69-centimetre wingspan

Warm, swampy forests were home to this flying **cockroach.**

300 million years ago
10 centimetres long

Giganotosaurus (*jig-ah-not-o-sawr-us*) may have been the largest predator that ever lived on land.

100 million years ago
14 metres long

The **terror bird** lived in South America.
It was the largest predator of its time –
big enough to eat a horse.

3 million years ago
2½ metres tall
