How?

How do astronauts get back to Earth?

How do planets stay up in space?

How many stars are there?

How does the Moon shine?

The Sun appears around 400,000 times brighter than the Moon.

How far can you go in space?

How many people have been to the Moon?

How long does it take to get into space?

How do rockets work?

How do people know so much about space?

How do astronauts go to the toilet?

I wish I'd gone before I came outside!

Yes or no?

Is there anyone in space right now?

Is it very dark in space?

Does space go on forever?

Are all planets made of rock?

The four planets furthest from the sun are actually MUCH bigger than the others.

Can you name all the planets in our solar system?

Can astronauts phone home?

Can I become an astronaut?

Are there aliens in outer space?

Will humans ever live on other planets?
