. . . a Rainbow Hunter!

Now, all she had to do was find one.

So Freya hunted high and low.

She searched far

and wide.

But there weren't any rainbows anywhere.

Freya was starting to feel a bit fed up,
until she remembered something . . .

. . . rainbows are made from rain and sun.

Rain + Sun = Rainbow!

She decided she would make one.

But it didn't work and now she had wet feet!

Freya was disappointed,
but she wasn't going to give up.

There *must* be another way to make a rainbow.

She opened her bag to look for ideas
and suddenly it came to her . . .

. . . she could hunt one colour at a time!

Red was first.

Freya spotted some rose hips
and ran over to pick a couple.

Easy peasy!
