Rosalind Franklin made many breakthroughs in science, but her biggest feat was helping to solve a *huge* mystery. In 1952, she took an X-ray photo that revealed the true structure of DNA, or the "Code of Life"!
You are a tricky molecule, DNA!

From a young age, Rosalind looked closely at the world around her to understand how things worked.
I wonder what they eat.

Born in London, England, in 1920, she had interests that most other girls didn't pursue at that time. She loved the strategy of field hockey.
Goal!

She loved debating.
Here is the proof!

But above all, she loved science.

Using chemistry, she coaxed out coal's inner secrets.
This coal is best to fuel factories, Mr. Churchill.
Your gas mask has an activated-coal filter.

In 1945, World War II ended. People in England and all across Europe celebrated in the streets.
