

DINOSAUR DROPPINGS

Some dinosaur dung (that's poo to me and you)
is almost twice as big as a basketball.
Just one poop like that could crush
a toilet flat. ***Whump. Splat. Smash.***
Other dung is different.
Some drop plops
as small as
a tiny
pea.

TYRANNOSAURUS REX

(ty-ran-oe-saw-rus)

From its terrible teeth to the tip of its tail,
T-Rex is longer than five lions laid in a line,
with a footprint bigger than the book in your hand.
T-Rex is **HUGE**.

Every day it needs to eat
over 100 kilograms of dinosaur meat.
That's 300 burgers a day!
T-Rex is HUNGRY.

So it HUNTS and it HUNTS and it HUNTS...

A VOLCANO ERUPTS

There is **lava** four times hotter than fire
underneath the Earth's crust.
We call it **magma**, until it erupts.

When things move around down there,
it gets pushed up through the surface,
like a red-hot river of Earth blood.

So much smoke, so much dust!
Lava runs faster than a dinosaur does!
Flattening forests and swallowing up EVERYTHING in its path...
