

Flowers

with transparent pages

My First Discovery Paperbacks

The orange tip sticks in the pistil.

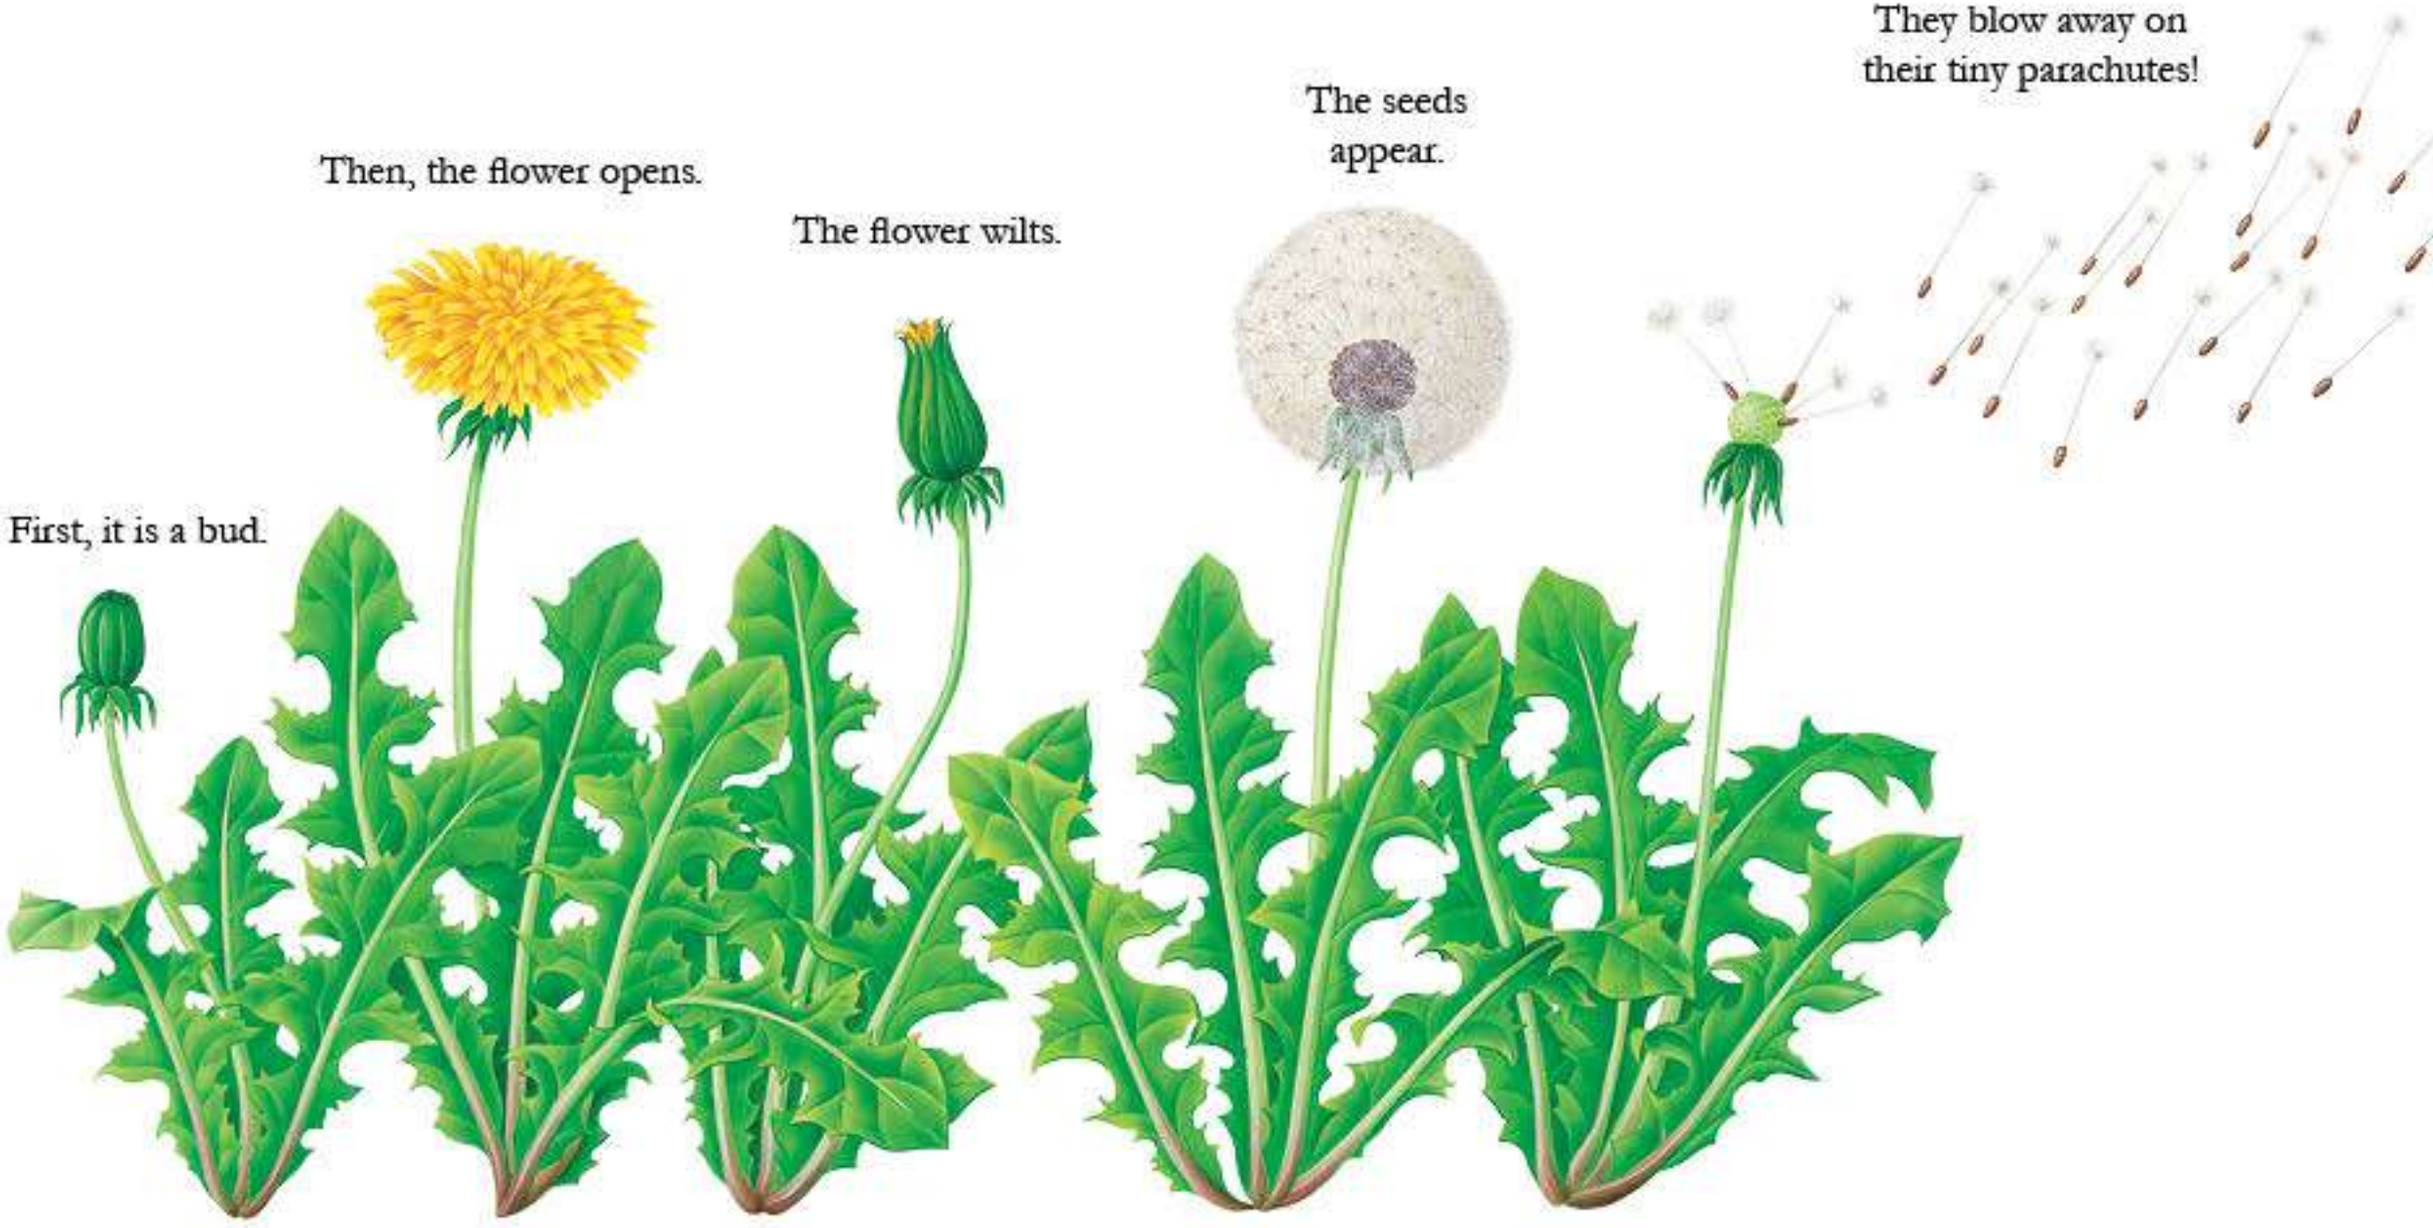

The stamens are dusted with yellow pollen.

Insects are attracted by the scent and colour of the flowers. They land on them and drink the nectar.

Pollen from the stamens sticks to their legs. They carry it to the pistils of other flowers.

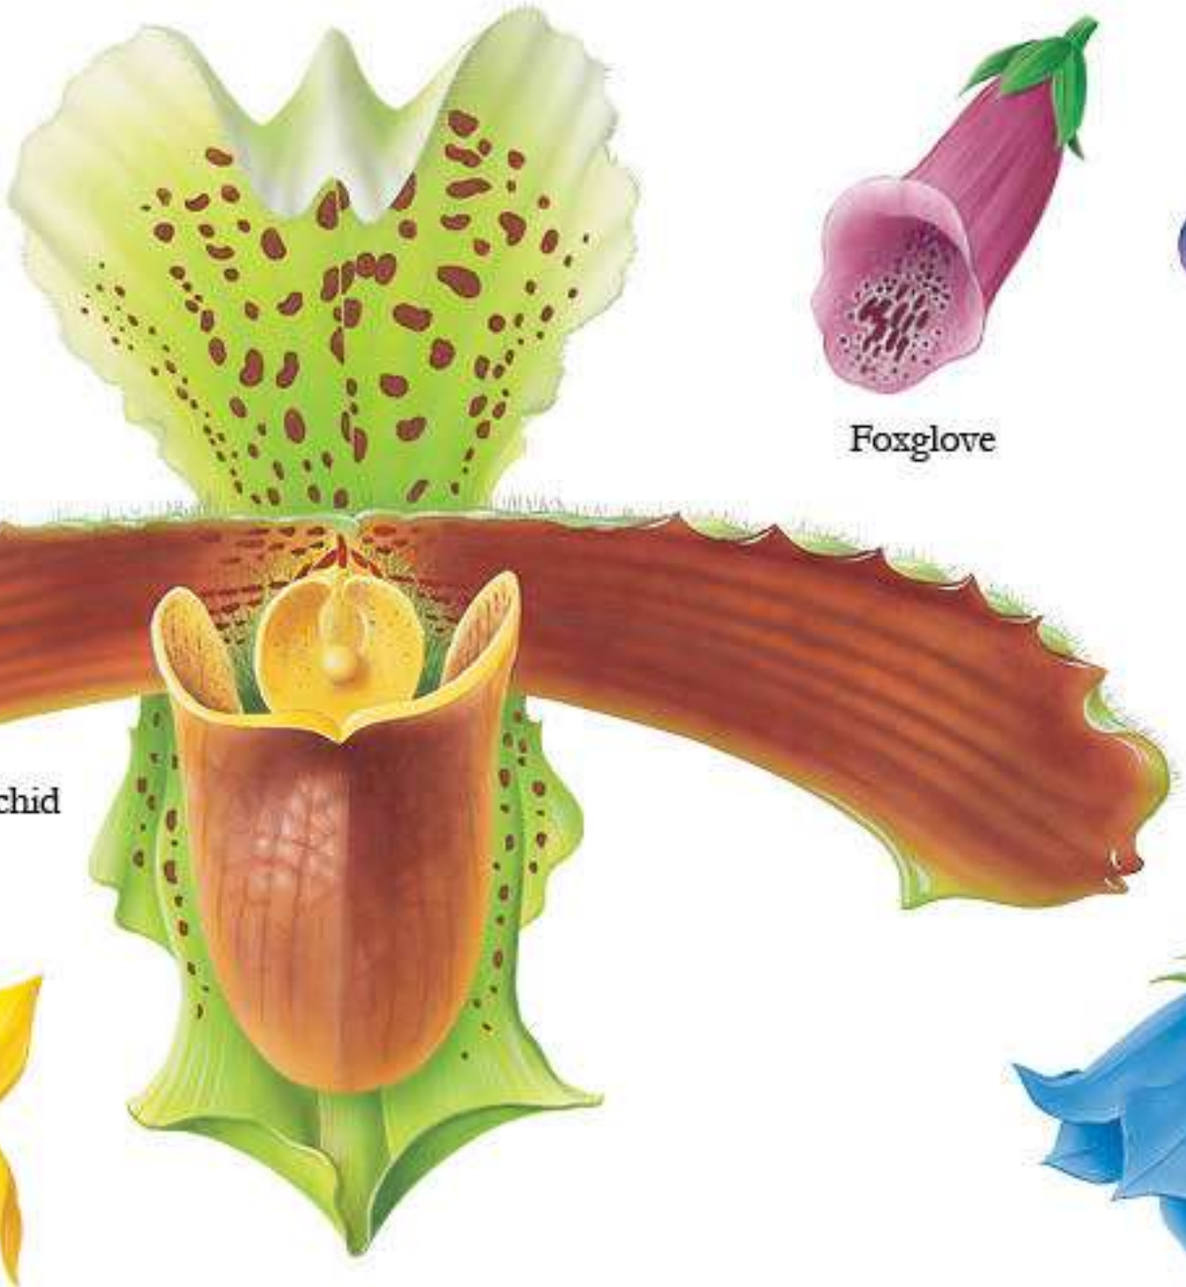

This is a dandelion, from flower bud to seed.

Sage

Orchid

Foxglove

Sweet violet

Clover

You can recognise flowers by their different shapes, colours and scents.

Daffodil

Harebell

Iris
