Insects

Torchlight

My First Discovery Paperbacks

Ants are always very busy.

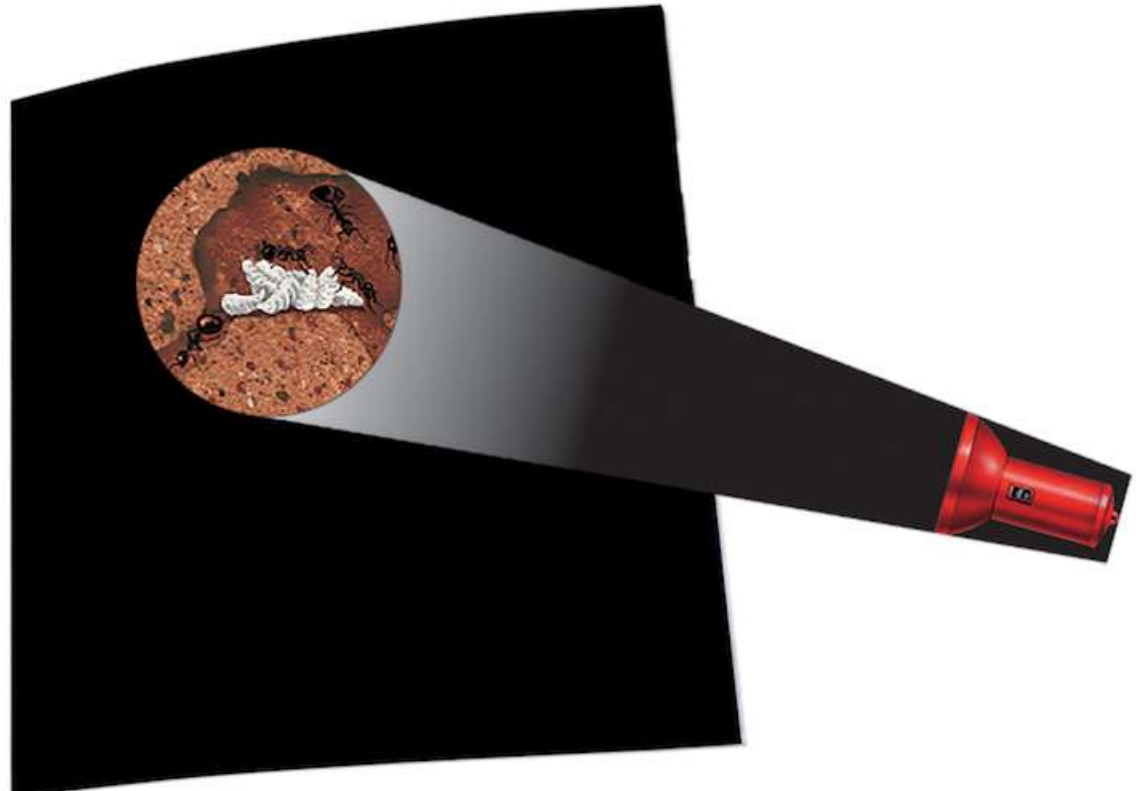

These ants need to take a large meal home! They break it into pieces, to make it easier to carry.

Use your magic torch to see worker ants looking after eggs, larvae and pupae.

Ants form a line and carry their loads to the anthill.

Many insects, like butterflies and dragonflies, spend their time alone in the open air.

Others, like ants, bees and termites, build extraordinary homes and live together in large groups.

Use your torch to find out about how these insects live.

Ants are always very busy.

These ants need to take a large meal home! They break it into pieces to make it easier to carry.

Use your magic torch to look around all the rooms in the anthill.

➥

Ants form a line and carry their loads to the anthill.

Here are the bees that live inside the hive.

The **queen** is always laying eggs. She is the mother of the hive.

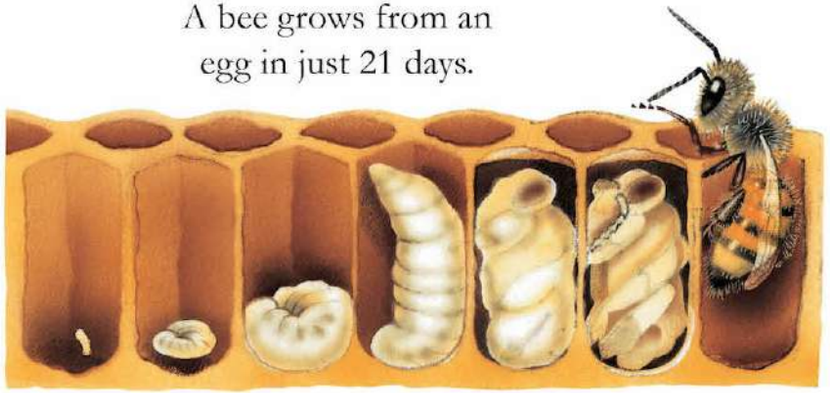

The **workers** build and clean the hive.

The **drone** mates with the queen.

A bee grows from an egg in just 21 days.

Use your magic torch to watch the queen lay her eggs, and see other bees at work.
