Imagine A WORLD

An amazing adventure into a wonderful world that might be closer than you think... Full of awe and excitement, this journey into the imagination will take you on an unforgettable voyage of discovery.

A love letter to our precious planet and all of its wonders, 'Imagine a World' explores the marvels of Earth and the creatures we share it with.

It also includes fun ideas for children to encourage and build their connection to nature.

"IMAGINE A WORLD...

...where lights of many colours dance,
shiver, twinkle, glimmer, sway
and shimmer across the
night skies," Emily said.

"IMAGINE
A WORLD...
...where plants use sunlight to help
make the air we breathe
and the food we eat!
"And huge sunshine flowers, twice as tall as us, turn
to face the sun and follow it across the sky."
"What happens if it's cloudy?"
asked the mermaid.
"Well, then they smile at each
other's sunny faces instead!"
Emily giggled.

"IMAGINE A WORLD...
...where giant, gentle creatures swim across vast seas and oceans, and sing songs to each other so they don't get lost...
...and where glowing, wobbling jelly-things can live forever!"
"This sounds like an AMAZING world!" smiled Freya. "Tell me more!"

"IMAGINE A WORLD...
...where feathery-flyers use magnetism
and starry skies to find their way..."

Create some magical land art

You can use the natural world around you to create beautiful art that will last until the weather or the water washes it away. It's best to find things that have fallen on the ground to help preserve any living plants or trees when you're finding your art materials!

Some ideas:

1. Balance different sized rocks from biggest to smallest to make a tower.
2. Collect leaves of every different colour you can find and create a rainbow from green to orange to red to brown.
3. Draw or write in the sand or build the biggest sandcastle the world has ever seen!
4. Forage for sticks, leaves, nuts, pinecones and petals and create a beautiful pattern on the ground. Leave it there for others to find...

Become an expert cloud gazer

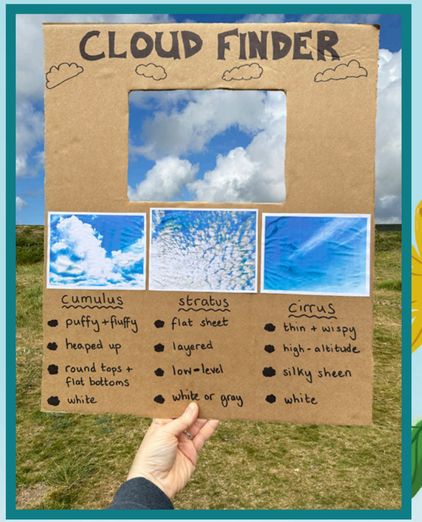

Did you know there are lots of different types of clouds? See which ones you can find!

Can you find these types of cloud?

1. Stratus: flat, layered and smooth.
2. Cumulus: heaped up and puffy, like a cauliflower.
3. Cirrus: high up and wispy.

Or just lie down and see how many faces, dragons, animals, shapes and objects you can see in the clouds...

Do others see the same as you or something different?

Why not make a special cloud finder frame out of cardboard and write the descriptions around it to help you identify them? Just like this one!
