LET'S LOOK IN PONDS & RIVERS

HOW TO USE THIS BOOK

Ponds and rivers come to life in the spring when the weather warms up. They are wonderful places to sit and watch wildlife – but never go too close to the water's edge and always stay with an adult. Use this guide to...

...read about the world of ponds and rivers and discover what is so amazing about them.

...take outside with you to see what you can find and identify, then tick off the things you see.

...have fun playing with the stickers on the fold-out pond-and-river play scene at the back.

Easy to spot

Most of these plants and animals are easiest to spot in the spring or summer.

Canada goose

pond skater

common frog

willow

pond snail

mare's tail

bird's nest

marsh marigold

dragonfly

goldfish

crane fly

mayfly

yellow iris

mallards

water boatman

heron

duckweed

common reed

Tick them off as you find them.

Life cycle of a frog

See how a frog changes as it grows from an egg into an adult. This process of changing states is called metamorphosis.

1. A female frog lays its eggs in water.

2. Each egg has jelly around it to protect it.

FROM
EGG TO
FROG

3. After two weeks, the eggs turn into tadpoles.

4. Each tadpole grows back legs, then front legs.

5. The tail shortens and then disappears.

Waterbirds

Look at the feet and beaks of waterbirds. Many have skin between their toes to help them swim, and their beaks are often flat to help sift the water for food.

Coots

These black birds have large, grey feet. The males use them for fighting.

Swans

Swans are one of the largest of all waterbirds. Their grey chicks are called cygnets.

Moorhens

They look like coots, but they are slightly smaller and have red beaks.

Mandarins

These colourful ducks come from China. The male is much brighter than the female.

Tufted ducks

If a duck has yellow eyes and a feathery tuft, it is likely to be one of these!

Great crested grebes

Watch these birds dive for food, then guess where they are going to reappear.
